The invention also comprises peptide fragments derived from stress activated protein kinases which are involved in protein phosphorylation. The compounds and peptides can be used in the treatment of massocial diseases, for example massocial fastophy, or in cases where modulation of phosphorylation of proteins with PDF diseases where modulation of signalling the activity receptors of voltage gated channels is necessary, or in instances where the localisation of SAPK3 at the neuromuscular junction or sarcolemma needs to be disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present sequence is the protein sequence of the human post-synaptic density protein 95 (PSD-95). It is described with reference to the methods of the invention, which involve the identification of compounds
                                                                                                                                                                                                                                                                                                                                                                                 MMAC1 pathway;
                                                                                                                                                                                                                                                                                                                                                                                                                 Human; MMSCl protein; MMACl interacting protein; tumour suppression;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Amino acid sequence of the human MMSC1 protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         29-SEP-1999 (first entry)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present sequence represents human dlg 2 molecule. The present invention describes human discs large i gene (dig family expressible in nerve tissue. Also described are: (1) a polymocleotide (PN) encoding dlg and comprising a 3100 (1) or 3213 bp (II) sequence; (2) RNA corresponding to PN having sequences (I) and (II); (3) RNA having a base sequence translated by dlg, (4) as antisces RN having a set least 15 bp sequence, and which is a part of PN of (1); (5) a derivative of the antisense PN; (b) an antibody specific for dlg, and (7) as antibody specific for a perpense. The polymoptide, RNA's and antibodies can be used for detection of dlg. The antisense PN can be used for detection of dlg. The antisense PN can be used as a thetapeutic composition for treating cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  PSD 93, nNOS, neuronal nitric oxide synthase, Alrheimer's disease; diagnosis, muscular dystrophy, skeletal muscle, Huntington's disease; Duchenne muscular dystrophy; backer muscular dystrophin; sarectemmu, FTS domain; neurodegenerative disease; gene therapy;

                                                                                                                                                                                                                                                                                        the present sequence represents human dlq l molecule. The present invention describes human discs large 1 gene (dlq) family expressible in nerve tissue. Also described are: (l) a polynucleotide (PN) encoding dlq and comprising a 4100 (l) or 3215 bp (II) sequence: (2) kNA corresponding to PN having sequences (1) and (tl): (3) kNA having a base sequence translated by dlq. (4) at antiscuse PN having a at least 15 bp sequence, and which is a part of PN of (l): (5) a derivative of the antiscuse PN: (6) an antibody specific for dlq. and (7) an antibody specific for a polypertide having a 817 or 849 at sequence. The polypertide kNA's and antibodies can be used for detection of dlq. The antiscuse PN can be antibodies can be used for detection of dlq. The antiscuse PN can be

The method involves introducing intro a cell, an antagonist that inhibits binding between a PDZ protein and a PL protein. The inhibitor is used to treat a disease mediated by hematopoietic cells, e.g. autoimmune disease. It may also be used to prevent transplantation rejection of a solid organ transplant. The method may also be used in the treatment of inflammation, allergy, inflammatory bowel diseases, alcerative colities, ileitis, psyriasis, asthma, atopic dermatitis, autoimmune

The primer sets can be used in antisense therapy and in gene therapy. The primers are ascular for synthesising polynocloculdes, particularly full length cDNAs. The primers are also useful for the proteins encoded by detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cPNAs easily without any specialised methods. AARO3366 to AARO446 to AARO4833 represent human amino acid segrences; and AARO3465 to AARO3463.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        complementary strand of a polynucleotide which comprises a 5'-end sequence and an olidonucleotide comprising a sequence complementary to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         to the complementary strand of a polynoclectide which comprises one of
the 5602 nucleotide sequences defined in the specification, where the
oligonucleotide comprises at least 15 nucleotides; or (b) a combination
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention describes primer sets for synthesising 5602 full-length cDNAs defined in the specification. Where a primer set comprises: (a) an oligo-dI primer and an oligonucleotide complementary
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Primer sets for synthesicing polymertectides, particularly the 5602 null-length cDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           oligonucleutide comprises at least 15 nucleutides and the combination of the 5'-end sequence/3'-end sequence is selected from those defined in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     of an oligonucleotide comprising a sequence complementary to the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        WPI; 2001-318745/34

They may be used to treat curvers, neurological disorders and developmental disorders such as William's syndrome. CJPDZ or vectors containing CJPDZ may be administered to treat any of the above diseases by rectifying mutations or deletions in a patient's genome that affect cell signalling by expressing inactive proteins or to supplement the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        nucleic acid sequences in samples, and hence which patients may be in meed of restorative therapy. They may also be used to study the expression and tenefich of ourse projects demains and their role in collular sidualling the ourse projects defaults may be used to antiacus in the production of antibodies and in assays to identify medulators
                                                                                                                                                                                                                                                                                                                                                                                                                                            Human; cell junction PDZ protein; CJPDZ; antiqen; antibody; cytostatic; anti-leukaemic; neuroprotective; anticplieptic; anti-Alzheimer's diseas nootropic; anti-convulsant; cancer; leukaemia; myeloma; sarcoma;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        cell signalling by expressing inactive proteins or to supplement the patients own production of CJPDZ protein domains. Antisense nucleic acid molecules may be administered to down regulate CJPDZ protein domain expression by binding with the cells own CJPDZ genes and preventing their expression. CJPDZ polynucleotides may also be used as DNA probes in diagnostic assays to detect and quantitate the presence of similar
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence

Disorders of ell shoulding and CJPDZ expression and activity that has be presented diadocsed ant/or rested by the above methods include that the example cancers (e.g. leukacmia, myelene, sare-ma or land, liver colon or sphere cancer), neurological disorders (e.g. epileys), Althoracy's discase and/or Hantisatan's choreo). A full list of disorders that may be treated is given in the specification. The present sequence represents has an CJPDZ.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            AAB93600 standard; Protein; 197 AA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 control/regulate expression and activity of CIPDZ. The anti-CIPDZ antibodies may also be used as diagnostic agents for detecting the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      polypeptide. The polypeptide may be used as an antiquo in the production of antibodies against CJFD2 and in assays to identity molecules which bind till be including modulators of CJFD2 expression and activity. The anti-CJFD2 antibodies, agonists and antagonists may be used to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Claim 1; Fig 1; 28pp; English.
